

STYL Flow for Airport Terminals

MoonFish location hardware + Atlantic software

"See the crowd build, and move staff before the queue forms. All data stays in your data centre."

What it does

Shows crowd levels

A heatmap of each zone from your current counters. An alert before a zone passes your limit.

Finds staff and equipment

Badges and tags show staff, wheelchairs and buggies on the terminal map, to ± 20 cm.

Makes the terminal report

Time in each zone, response times and replay. The report is ready at shift change.

Three reasons customers buy from STYL

1 Inside your perimeter

All of Atlantic operates in your data centre, with no internet link.

2 Uses what you have

Atlantic reads your counters, Wi-Fi and BLE data. You keep them.

3 Staff on one map

Staff and equipment to ± 20 cm, on the same map as the crowd.

Facts you can tell the customer

± 20 cm

Location accuracy for a staff badge.

2 each second

New position for each badge.

Unlimited users

All duty managers see the map.

18 years

STYL in Singapore. ISO 27001 certified.

Who to talk to, and what to say

Person	Their problem	What you say
Terminal operations head	Queues form before staff can act.	"You see the crowd build, and move staff in time."
Passenger services	Wheelchair requests wait for a free staff member.	"You see the nearest wheelchair and the nearest staff member."
Commercial and retail	Time in each zone is not known.	"You see how long people stay in each zone."
IT and security	Data must stay inside the airport.	"All of Atlantic runs in your data centre."

If the customer names a competitor

The customer says	You say
"We have Xovis sensors."	"Keep them. Atlantic puts their counts and your staff on one map."
"SITA or Amadeus does flow."	"They plan flights and gates. We show people and equipment on the floor, now."
"Cameras can do this."	"You need no new cameras. Your counters and our badges are enough."
"BLE beacons cost less."	"BLE shows the zone. We show the staff member, to ± 20 cm."

Say

- "See the crowd before the queue forms."
- "Uses your current counters."
- "All data stays in your data centre."

Do not say

- "We track every passenger." Phone capacity is not confirmed.
- "Indoor wayfinding for passengers." Multi-floor paths are Q2 2027.
- "Replaces your flow system." We use its data.

One price per 1,000 m² of public area. Three parts.

We price by the public area that the airport wants to see. Each 1,000 m² includes 8 anchors and 40 staff tags. ^E = Engineering must confirm this before release. If not confirmed, remove it.

SOFTWARE
S\$12,000
per 1,000 m², per year

+

HARDWARE SERVICE
S\$250
per 1,000 m², per month

+

SET-UP
After survey
one time

Part 1 — Software

Part 1 — one package	Terminal — Self-hosted START HERE
Software, per 1,000 m ² per year	S\$12,000
Platform fee, per deployment per year	S\$95,000
Servers	Airport provides, to our specification
Support	24/7, included
Software updates	We install them with your IT team
Where we sell it	Singapore

Includes: crowd heatmap and replay · zone alerts · staff and equipment map · terminal reports · links to counter, Wi-Fi and BLE data · unlimited users. Cloud is not offered to airports in Singapore.

Part 2 — Hardware service

- S\$250 per 1,000 m² per month.
- Includes 8 anchors and 40 staff or equipment tags for each 1,000 m², spare parts and repairs.
- Extra tags: S\$800 for 10.
- Passenger phones are not tags in this version. ^E
- The site survey sets the number of anchors.

Part 3 — Set-up (one time)

- Site survey: S\$6,000 for each terminal.
- Installation: S\$200 for each anchor.
- Links to counters, the airport operations database and staff systems: S\$1,400 for each engineer-day.

Price changes

Change	Price
Minimum software fee	S\$60,000 per site per year
More terminals	Same price per 1,000 m ²
Contract	3 years
Volume	No volume table

Example: one pier, 25,000 m²

Part	S\$ per year
Software: 25 × S\$12,000	300,000
Platform fee	95,000
Hardware: 25 × S\$250 × 12	75,000
Per year	470,000
Per 1,000 m ² per month	S\$1,567

One time: set-up S\$88,000 (200 anchors, 30 engineer-days).

Start with a pilot

1 zone
Up to 5,000 m² of public area.

90 days
Atlantic-in-a-box in your data centre.

S\$60,000
Fixed fee.

Credit
Fee goes to year 1 if the airport buys.

Ask in the first meeting

Question	Why you ask
How many m ² of public area? Which zones first?	Sets the hardware price and the anchor count.
Which counters or sensors do you have now?	Sets the link work.
How many staff and equipment items need a tag?	Sets the allowance and extra packs.
Which queue limit makes you act today?	Sets the success measures.

Before the pilot: agree the success measures, the full price and a reference. **Discounts:** Sales Director approves up to 20%. CEO approves more than 20%. No discount on the minimum fee or the platform fee. Product confirms the live feature list before each quote. Prices in SGD, before GST.
