

Market, competitors and price logic

For the STYL product team. Read this with Sales Sheet v0.1. Do not send to customers. Stages 2 and 3 are open: each fact shows its confidence.

Summary

What we sell

A terminal crowd view from current counters, with staff and equipment located to ± 20 cm. Self-hosted, 24/7 support.

Where we sell

Singapore airport terminals first: CAG is in pursuit. Ground handlers follow with Operations RTLS.

Price and margin

S\$1,567 per 1,000 m² per month at CAG scale. Quote margin 56% over 36 months; customer margin 51% over 24 months.

The market

US\$3.8B

Airport passenger flow management, 2025. Growth 9.2% a year. Marketintel; one source only. Guessing

38%

Asia-Pacific share; Changi named as a regional leader. Same source.

Guessing

100+

Airports that use Xovis 3D sensors (Xovis, May 2022). The incumbent tool. Likely

T5

Demand driver: Changi Terminal 5 opens by about 2030. GovInsider. Likely

Competitor groups

Group	Technology and performance	Strong point	Weak point	Our answer
3D sensor flow: Xovis; Veovo BlipVision	Ceiling 3D sensors. Counts and queue times.	100+ airports. Anonymous counts.	Counts people. No staff or equipment location.	Use their counts. Add staff and equipment.
Airport IT suites: SITA, Amadeus	Planning and operations systems.	Own the airport systems. About 22% and 18% share (Marketintel).	Plan view, not the floor now.	Overlay. Link through their APIs.
Wi-Fi and BLE analytics: Veovo BlipTrack, Cisco	Phone signals. Zone level.	Low cost. Uses current Wi-Fi.	Not accurate to the person.	Staff to ± 20 cm.
Video analytics	CCTV and AI.	Uses current cameras.	Privacy concerns. Compute cost.	No new cameras.
Substitute: staff with radios	People on the floor.	No new system.	Late action. No data.	Alerts before the queue forms.

Where we win

- All of Atlantic runs inside the airport perimeter.
- Uses the counters that the airport has now.
- Staff and equipment to ± 20 cm on the crowd map.
- One platform with cargo RTLS: one supplier for the airport.
- Local team: 18 years in Singapore, ISO 27001.

Where we lose today

- No airport reference yet.
- Phone capacity not confirmed: no passenger location.
- Wayfinding for passengers is Q2 2027.
- No link to the airport operations database yet.
- Xovis has a large installed base.

Threats to monitor

Threat	Why it is important	Our action
Xovis adds staff location	Closes our main gap.	Win the CAG pilot first. Link to Xovis data.
CAG builds in-house	Changi runs a S\$50M programme for new solutions.	Enter through the programme as a partner.
UWB in airline or airport apps	Others use passenger phones first.	Keep phone support on the roadmap; confirm capacity.

Why the price is correct

5 decisions. Each decision has a reason and a check.

Decision 1 — Price unit

- **Reason:** airports budget by terminal and zone. Public area sets the anchor count.
- **Check:** the survey measures the public area before the quote.

Decision 2 — Three parts

- **Reason:** we see the margin of each part. The 24/7 support (cost S\$93,000 a year) is in the software price.
- **Check:** hardware margin 76% (decision 5).

Decision 3 — Packages

Package	Price	Buyer	Reason for the price
Terminal, self-hosted START HERE	S\$12,000 per 1,000 m² a year + S\$95,000	Terminal operations head	CAG requires its own data centre. Fixed cost S\$179,600 a year (self-hosted + 24/7).

Decision 4 — Benchmarks

No public price found. Xovis, Veovo, SITA and Amadeus do not publish prices **Certain**. The rule asks for two public prices. Action: find two prices in GeBIZ awards or partner quotes before release.

Decision 5 — Value and hardware check

Value **Guessing**

2 million departing passengers a year through the pier. If Flow moves 2 minutes from queue to shops, at S\$0.50 spend a minute: about S\$2M a year in retail. The price is S\$470,000 a year.

Hardware

8 anchors × S\$100 + 40 tags × S\$40 = S\$2,400 per 1,000 m²: about S\$60 a month with spares. Price S\$250: margin 76%. Capacity: 64 tags at one time covers 40 staff tags. A busy queue has up to 500 people per 1,000 m²^E.

Margin and discount rules

No quote below 30% gross margin. Target 40% for each customer over 24 months. Sales Director: up to 20%. CEO: more than 20%. No discount on the minimum fee or the platform fee. The 24/7 support share is the largest cost.

Product team actions

1. Engineering: confirm how many phones one anchor can serve.
2. Product: list the live Flow features; only these go in the sheet.
3. Stage 3: find two public prices.
4. Tech: build the link to Xovis and counter data.
5. Sales: win the CAG pilot and a reference.
