

Market, competitors and price logic

For the STYL product team. Read this with Sales Sheet v0.1. Do not send to customers. Stages 2 and 3 are open: each fact shows its confidence.

Summary

What we sell
The hands-free gate decision: UWB anchors at the gate and Atlantic in the operator data centre. Simulate sizes it first.

Where we sell
Singapore rail and bus first: LTA is in pursuit, through NCS or ST Engineering. Japan through partners later.

Price and margin
S\$74 per gate per month at 720 gates. Quote margin 54% over 36 months; customer margin 47% over 24 months.

The market

2018
LTA hands-free gate trial: 4 MRT stations, 50 users, Bluetooth and RFID, 6 months. LTA. Certain

2020
LTA plans more trials of a system for buses and trains. No dates given. LTA. Certain

11 stations
Shenzhen Yunba Line 1: UWB ticketing with NXP; full roll-out planned for Oct 2024. Likely

~60 a minute
Possible UWB riders per gate. Few phones and closed phone UWB limit roll-out. Mobility Payments, Aug 2025. Likely

Competitor groups

Group	Technology and performance	Strong point	Weak point	Our answer
Local fare system (card and account)	Tap on a reader.	Every rider has a card.	A tap is needed.	We send trips through their API.
Bluetooth or RFID hands-free (LTA 2018)	Proximity at a wide gate.	Tested in Singapore.	Near the gate, not in the lane.	UWB lane position ^E .
UWB chips and integrators: NXP with Shenzhen Tong; Infineon	UWB in gates and phones.	Live on 11 stations.	Chips, not an operations platform.	Partner with NXP. Add Simulate and Atlantic.
Phone wallets: Apple, Google, Samsung	UWB in the phone.	Own the phone.	Some close UWB to other apps.	UWB card for the first users.
Gate suppliers	Gates and readers.	Own the gate.	No UWB sizing tool.	Supply anchors and software to them. Guessing

Where we win

- Simulate sizes the gate line before install.
- Atlantic runs inside the operator data centre.
- NXP is our silicon partner.
- One console for gates, faults and crowds.
- Local team: 18 years in Singapore, ISO 27001.

Where we lose today

- No transit reference.
- Gate throughput not tested with 8 tags per anchor.
- Some phone makers close UWB to apps.
- No gate supplier partner yet.
- No fare system link yet.

Threats to monitor

Threat	Why it is important	Our action
Gate supplier and NXP sell direct	We lose the gate hardware.	Agree a role with NXP now: Simulate and Atlantic.
LTA keeps tap-only, account-based fares	No hands-free demand.	Lead with accessibility; LTA tested it in 2018.
Phone makers keep UWB closed	Few riders can use it.	UWB card first; track phone support.

Why the price is correct

5 decisions. Each decision has a reason and a check.

Decision 1 — Price unit

- **Reason:** operators budget by gate and by bus. The gate count sets the anchor count.
- **Check:** the gate study counts lanes and doors before the quote.

Decision 2 — Three parts

- **Reason:** set-up is large (1,210 anchors, 150 engineer-days), so it is a separate line.
- **Check:** hardware margin 67% (decision 5).

Decision 3 — Packages and minimum

Package	Price	Buyer	Reason for the price
Transit, self-hosted START HERE	S\$400 per gate a year + S\$95,000; minimum S\$250,000	Transit authority or operator	Fixed cost S\$179,600 a year (self-hosted + 24/7). The minimum keeps a small first phase above 30%.

Decision 4 — Benchmarks

No public price found for UWB gates. Shenzhen Tong and NXP did not publish one **Certain**. The rule asks for two public prices. Action: search GeBIZ and LTA awards, and ask NXP for gate prices.

Decision 5 — Value and hardware check

Value **Guessing**
10 stations × 30,000 riders a day × 2 seconds saved = 167 hours a day, 61,000 hours a year. At S\$15 an hour: about S\$0.9M a year. The price is S\$642,000 a year.

Hardware
2 hardened anchors × S\$200 = S\$400 per gate: about S\$10 a month with spares. Price S\$30: margin 67%. Capacity: 2 anchors × 8 = 16 phones at one time per lane. A lane at 40 riders a minute^E.

Margin and discount rules
No quote below 30% gross margin. Target 40% for each customer over 24 months. Sales Director: up to 20%. CEO: more than 20%. No discount on the minimum fee or the platform fee. The gate study is not credited.

Product team actions
1. Engineering: test lane throughput with the 8-tag limit.
2. Product: list phones that open UWB to our app.
3. BD: agree roles with NXP and one gate supplier.
4. Stage 3: find two public prices; count gates in Singapore.
5. Tech: design the fare system and acquirer link.
