

STYL Hands-free Gates for Transit

MoonFish UWB anchors at the gate + Atlantic software

"Riders walk through the gate. The phone stays in the pocket."^E

What it does

Opens the gate hands-free

The gate finds the rider's UWB phone or card in the lane, and opens.^E

Records each trip

Atlantic sends each entry and exit to your fare system, and keeps the records.

Shows gate health

Gate faults, lane flow and station crowds on one console.

Three reasons customers buy from STYL

1 Sized before install

Simulate shows the limit of the gate line before hardware ships.

2 Inside your perimeter

Atlantic operates in your data centre, with no internet link.

3 Your fare rules stay

We connect through your fare and acquirer APIs. You keep your gates and cards.

Facts you can tell the customer

2 each second

New position for each device.

Channel 9

UWB channel approved in Singapore.

Self-hosted

All data stays in your data centre.

18 years

STYL in Singapore. ISO 27001 certified.

Who to talk to, and what to say

Person	Their problem	What you say
Transit authority	Riders with disabilities find it hard to tap. LTA tested hands-free gates in 2018.	"UWB finds the rider in the lane, not only near the gate." ^E
Rail and bus operator	Gate lines limit flow at peak.	"Simulate shows the limit of your gate line before we install."
Fare system owner	The card and account system must not change.	"We connect through your API. Your fare rules do not change."
IT and security	National data rules.	"Atlantic runs in your data centre."

If the customer names a competitor

The customer says	You say
"We tested Bluetooth and RFID in 2018."	"Bluetooth finds a phone near the gate. UWB finds it in the lane." ^E
"Shenzhen does this with NXP."	"Yes, UWB gates work at scale. We add sizing and operations on one platform, in Singapore."
"Few phones have UWB."	"Start with accessibility users and a UWB card. Phone numbers grow each year." ^E
"Our gate supplier can add it."	"Good. We supply anchors and software to your gate supplier."

Say

- "Walk through. Keep the phone in your pocket."^E
- "We size the gate line before we install."
- "Your fare rules do not change."

Do not say

- "Works with every phone." Many phones have no UWB, and some makers close UWB to apps.
- "40 people a minute." Not tested yet.
- "Ready now." We have no transit reference.

One price per gate. Three parts.

A gate is one station lane or one bus door. Each gate includes 2 hardened anchors. ^E = Engineering must confirm this before release. If not confirmed, remove it.

SOFTWARE
S\$400
per gate, per year

+

HARDWARE SERVICE
S\$30
per gate, per month

+

SET-UP
After the gate study
one time

Part 1 — Software

Part 1 — one package	Transit — Self-hosted START HERE
Software, per gate per year	S\$400
Platform fee, per deployment per year	S\$95,000 (disaster recovery included)
Minimum software fee, per operator per year	S\$250,000
Servers	Operator provides, to our specification
Support	24/7, included
Where we sell it	Singapore. Japan through partners, later

Includes: gate decision and trip records to the fare system · approvals · lane flow and fault view · station crowd view · unlimited users.

Part 2 — Hardware service

- S\$30 per gate per month.
- Includes 2 hardened anchors for each gate, spare parts and repairs.
- Riders use their own UWB phones, or UWB cards (price to set).^E
- The gate study sets the number of anchors.

Part 3 — Set-up (one time)

- Gate study with Simulate: S\$28,000, fixed.
- Installation: S\$400 for each hardened anchor.
- Links to the fare system and the acquirer: S\$1,400 for each engineer-day.

Price changes

Change	Price
Minimum software fee	S\$250,000 per operator per year
Platform fee	Once per deployment
Contract	3 years
Volume	No volume table

Example: 720 gates (10 stations, 300 buses)

Part	S\$ per year
Software: 720 × S\$400	288,000
Platform fee	95,000
Hardware: 720 × S\$30 × 12	259,200
Per year	642,200
Per gate per month	S\$74

One time: gate study S\$28,000; set-up S\$694,000 (1,210 anchors, 150 engineer-days).

Start with a pilot

6 gates
Up to 6 lanes or bus doors.

120 days
Atlantic-in-a-box; fare link tested.

S\$120,000
Fixed fee. Ask NXP to co-fund.

Credit
Fee goes to year 1 if the operator buys.

Ask in the first meeting

Question	Why you ask
How many gates and bus doors?	Sets the software and hardware price.
Which fare system and acquirer?	Sets the link work.
Who rides first: accessibility users or staff?	Sets the pilot group and devices.
Who supplies your gates?	Sets the install plan.

Before the pilot: agree the success measures, the full price and a reference. **Discounts:** Sales Director approves up to 20%. CEO approves more than 20%. No discount on the minimum fee or the platform fee. Engineering confirms the gate throughput before any quote. Prices in SGD, before GST.
