

Market, competitors and price logic

For the STYL product team. Read this with Sales Sheet v0.1. Do not send to customers. Stages 2 and 3 are open: each fact shows its confidence.

Summary

What we sell Operations RTLS: staff, vehicles and cargo to the bay, as a monthly service. Cloud or self-hosted.	Where we sell Airport ground and cargo handlers in Singapore first (SATS, dnata). Then civic estates and plants.	Price and margin S\$1,100 per 1,000 m ² per month in the cargo example. Quote margin 55% over 36 months; customer margin 50% over 24 months.
---	--	---

The market

US\$7–10B Global RTLS market, 2024–25. Growth 24–25% a year. Mordor Intelligence; Meticulous Research. Likely	UWB Fastest-growing RTLS technology. Asia-Pacific is the fastest-growing region. Same two sources. Likely	2 handlers SATS and dnata at Changi. Floor area in our first market is not counted yet. Guessing	Labour Demand driver: staff shortage; Changi Terminal 5 opens by about 2030. GovInsider. Likely

Competitor groups

Group	Technology and performance	Strong point	Weak point	Our answer
Industrial UWB: Sewio, Pozyx, Ubisense	UWB. Sub-metre to 30 cm (vendor claim).	Good accuracy. Public kit price: Pozyx from 4,970 (€ or \$).	Customer buys hardware. No local team.	Monthly service; we own the hardware. Local team.
Enterprise RFID and BLE: Zebra, Impinj, Kontakt.io	RFID, BLE. Zone or room.	Large installed base. RFID is 52% of the market.	Not accurate to the bay.	Atlantic reads their data. Add UWB where the bay matters.
UWB service: Proximos (UK)	UWB. ±25 cm. Price per tag.	Price includes hardware.	At least 1,000 tags and 15 tags per 100 m ² . UK and EEA cloud.	Price per area, not per tag. Singapore cloud.
Substitute: barcode scans and search	Last scan only.	No new cost.	Staff time. Lost ULDs.	Value case: hours saved.
Local incumbent	Not found yet.	—	—	Stage 3: ask SATS and dnata. Guessing

Where we win - Accurate to the bay (±20 cm badge), 2 positions each second. - No hardware to buy: monthly service. - Cloud in Singapore, or self-hosted. - Reads RFID and BLE data that the customer has now. - Local team: 18 years in Singapore, ISO 27001.	Where we lose today - No cargo or warehouse reference yet. - Hardened kit is not tested outdoors. - Badge needs a charge each week; no long-life asset tag. 1 anchor serves 8 tags at one time; cargo areas have many tags. - No link to a cargo or warehouse system yet.
--	--

Threats to monitor

Threat	Why it is important	Our action
Bluetooth Channel Sounding	Low-cost BLE reaches about 0.3–1 m from 2027 (CIO brief).	Keep the message on the bay and on service.
Zebra adds UWB to its RFID base	Same customer, same supplier.	Atlantic reads Zebra data. Win the first cargo site.
Handler builds it with its WMS supplier	The customer owns the project.	Offer links to their WMS through the API.

Why the price is correct

5 decisions. Each decision has a reason and a check.

Decision 1 — Price unit

- **Reason:** operators budget by site and floor area. A price per tag puts us against BLE tags at US\$2–6.
- **Reason:** floor area sets the anchor count, our main hardware cost.
- **Check:** the survey measures the area before the quote. Cargo needs many tags, so extra tags are a separate pack line.

Decision 2 — Three parts

- **Reason:** we see the margin of each part. Hardware is a service, so the customer has no capital cost.
- **Check:** the hardware margin is 76% at the capacity limit (decision 5).

Decision 3 — Packages

Package	Price	Buyer	Reason for the price
Cloud START HERE	S\$9,000 per 1,000 m ² a year	Operations manager, one site	No servers. Cloud cost S\$3,200 per site a month (CIO).
Self-hosted	+ S\$95,000 per deployment a year	IT that keeps data inside	Pays Solace and support: cost S\$86,600 a year (CIO).

Decision 4 — Benchmarks

S\$ per 1,000 m² per month. £1 = S\$1.72. Proxximos G-Cloud 15 list (via CIO brief) **Certain**

STYL Operations, indoor	S\$1,000
STYL Operations, hardened	S\$1,250
Proxximos, 40 asset tags (below their rule)	S\$642
Proxximos at their minimum density (150 tags)	S\$2,408

Pozyx kit: from 4,970 for 4 anchors, 6 tags and 1 year of platform (currency not stated) **Likely**. Not a per-area price.

Decision 5 — Value and hardware check

Value Guessing 60 staff a shift, 3 shifts, 10 minutes saved a shift = 10,950 hours a year. At S\$30 an hour: about S\$329,000 a year. The cargo price is S\$264,000 a year.	Hardware 8 anchors × S\$100 + 40 tags × S\$40 = S\$2,400 per 1,000 m ² . Over 60 months plus 10% spares: about S\$60 a month. Price S\$250: margin 76%. Capacity: 8 anchors × 8 tags = 64 tags at one time. Cargo has 150–225 tags per 1,000 m ² ^E .
Margin and discount rules No quote below 30% gross margin. Target 40% for each customer over 24 months. Sales Director: up to 20%. CEO: more than 20%. No discount on the minimum fee or the platform fee. Small site check: 2,000 m ² , cloud, minimum fee: margin about 40%.	Product team actions 1. Engineering: test hardened anchors and tags outdoors. 2. Engineering: confirm tag density above 64 tags per 1,000 m ² . 3. Product: find an asset tag with a long battery life. 4. Stage 3: measure cargo floor area; find the local incumbent. 5. Sales: test the price with SATS and dnata.
